EDUCATION

Padjadjaran University

Bachelor of Computer Science (3.87/4.00)

August 2023–Present

Relevant courses: Algorithms and Data Structures, Artificial Intelligence, Machine Learning,, Data Mining, Software Engineering, Database System, High Performance Computing, Computer Network, Object-Oriented Programming,

PROFESSIONAL EXPERIENCE

Padjadjaran University – Center for Teaching and Learning Innovation

March 2026–June 2026

Full Stack & AI Engineer Intern

- Built a full-stack web app (Next.js, PostgreSQL, S3) with image upload for chemical solution concentration analysis.
- Trained an ML regression model to predict chemical concentrations from images, achieving 99%+ prediction accuracy ($R^2=0.9924$, cross-validated $R^2=0.9947$) with low error margins (MAE = 0.0441, RMSE = 0.0738).

Simplview

January 2026–March 2026

Full-stack & Gen AI Engineer Intern

- Developed a multi-model pipeline using Gemini API and LangChain to automate scripting and data tables analysis.
- Boosted AI response accuracy by ~60% through prompt engineering, context management, and metadata generation from data tables, enabling natural language interaction with uploaded datasets on the web app.
- Built a separate public API server with API Key authentication and docs, mirroring core backend logic for third-party access.

Organic Steel

October 2025–December 2025

Software Engineer Intern

- Maintained and operated 3+ production websites, achieving 90%+ uptime through routine maintenance and bug fixes.
- Designed and Implemented GitLab CI/CD pipelines, automating build and deployment workflows, cutting manual deploy time by ~80% and improving deployment consistency.

ENTREPRENEURIAL EXPERIENCE

Piowsee | [Website](#) | [GitHub](#)

January 2025–Present

Co-Founder, Software Engineer

- Co-founded an AI-native software house, leading development of pesan.ai, a beta-stage platform transforming WhatsApp into an AI-powered bot with automated agent workflows (n8n) and a full-featured WhatsApp Web CRM dashboard.
- Managing application and database servers, including backups, uptime monitoring, and security hardening, to support real-time messaging, AI workflows, and CRM operations.

PROJECTS

Nmap | Network Scanner Tool | [Project Document](#)

August 2026

- built a tool that scans computer networks to detect active devices and open access points, without relying on existing scanning software.
- Implemented a feature that can identifies what type of service (like a website, email system, or file-sharing tool) is running on a device connected to the public network.

WastraNusa | Full-stack Web App | [Project Document](#)

June 2026

- Collaborated with a stakeholder to align product requirements and prioritize features throughout development.
- Built a full-stack marketplace app (Next.js, PostgreSQL) with role-based access for artisans and buyers.
- Integrated Wikipedia API to power a topic-based cultural encyclopedia on indonesia textiles.
- Implemented a payment gateway for secure end-to-end e-commerce checkout.

Discord Attendance Bot | [Project Document](#)

April 2025

- Built a Discord bot that automated attendance for 30+ students across 2 lab practicum sessions, allowing check-in with a single word on Discord and cutting logging time from minutes to just seconds.
- Reduced human error with a one-time configurable attendance window that automatically opens and closes for every future session, removing the need for manual adjustments each time.

CERTIFICATIONS

AWS re/Start Graduate | Amazon Web Services | [Document](#)

July 2025

ASEAN Youth for Digital Action | Orbit Future Academy | [Document](#)

February 2025

CS50x – CS50's Introduction to Computer Science | Harvard University | [Document](#)

January 2025

SKILLS

- **Languages & Core:** Python, TypeScript, JavaScript, SQL
- **Frameworks & Tools:** Next.js, React, React Query, Express.js, FastAPI, PostgreSQL, Prisma ORM, Git, Github Actions
